

Medical Genetics Residency Program
Medical College of Wisconsin Affiliated Hospitals, Inc
January 2015 update

POLICY: Moonlighting

Programs must comply with the MCWAH Moonlight policy. Should there be a conflict with the MCWAH policy and the program precedence.

ACGME Medical Genetics Program Requirements state:

1. Moonlighting must not interfere with the ability of the resident to achieve the goals and objectives of the educational program.
2. Time spent by residents in Internal and External Moonlighting (as defined in the ACGME Glossary of Terms) must be counted towards the 80-hour Maximum Weekly Hour Limit.
3. PGY-1 residents are not permitted to moonlight.

The Program Director of the Medical Genetics Residency Program prefers no moonlighting during the 2 year program. Moonlighting would interfere with required reading and call schedules.
