What does this community do well when it comes to mental health?

What are some important areas this community needs to improve on in this area?

What opportunities (for example, programs or projects) are already happening that community partners could support or build upon? Or, what would be an ideal project community partners could work on or create through this workgroup?

Looking ahead as a community, what opportunities do we want to pursue to help improve mental resiliency in this area? Are there changes that would help improve the collective ability to take advantage of those opportunities?
